

Commissioning Engineers

to Conduct Testing, Commissioning, Operator Training and Delivery of Plant

Do you want an exciting and versatile job in the project department of an international company, and do you have a technical education and experience in commissioning of technical plants. Are you accustomed with travelling and would you be happy with a lot of travel in hectic periods; then you might be Cimbria's new commissioning engineer.

Job tasks:

- start up the plant in cooperation with the supervisor on site
- make IO test
- make both dry test and wet test
- Training of customer's operators
- training of customer's service and maintenance personnel
- commission to the customer after testing and training

Job Skills:

- draw up comprehensive commissioning report in English
- have experience with technical plants
- have good communication skills, fluent English in writing and speak
- have a basic knowledge of programming of PLC and SCADA
- are prepared for a lot of travel
- have a personality that gets on in foreign cultures, experience from foreign cultures is an advantage
- have computer skills at intermediate level and flair and desire of preparatory desk work in our office, which is located in Thisted, DK.

You are energetic, responsible, and capable of structuring your day systematically. You are able to work independent and persistent and in addition, you are happy to work in project groups where team play and problem solving are paramount.

We offer a dynamic workplace with many professionals who cooperate internally and across national borders. The organization is flat and the tone is informal, and there are good working conditions and career opportunities for competent employees, as well as a solid introduction to the job and a salary at market level.

Cimbria

is one of the world's leading manufacturers of industrial plants for the treatment of grain and seed crops around the world. Cimbria has a turnover of 200 m. EUR and a staff of 800 spread across the world. In 2016, Cimbria was acquired by the American group AGCO, which sells equipment for the agricultural sector. The company expects continued growth as a supplier to e.g. leading international companies which in the coming years will invest heavily in research, value-adding and seed production to meet the need for a global increase in food production.

Cimbria's project department

design, supply and build industrial process lines and turnkey plants. The department is responsible for contract implementation from signature to delivery of plant and currently employs 150 employees, mostly engineers, technicians and skilled workers, many traveling abroad and expatriates.
