Cimbría Combi Cleaner type 157 has been developed pre-cleaning of Grain, Peas, Maize and rape seed, and Industrial cleaning of grain for milling or malting barley. The machine’s large screen area with its accurately matched stroke and frequency is complemented by Cimbría’s highly efficient recirculating pre- and after suction system.

1. **Inlet**
   Optimal feeding in the full width of the machine is achieved by a shaker feeder with step-less speed adjustment.

2. **Pre Suction with Air Recirculation**
   A precise adjustable airflow from the systems full width impeller, removes dust and fines from the incoming product and discharge it in the screw conveyer outlet and mini cyclone. 800 m³/h of air has to go to a central aspiration system or a filter.

3. **Pre suction Air Velocity** can be adjusted to the specific product.

4. **Main Distributor** can divide the product flow in 50% to each of the two screen shoes, or send the entire product in the upper or the lower screen shoe.

5. **Screens**
   (L x W = 800 x 1250 mm) can all be used as sifting or scalping screens. There is one outlet per screen and that allows the most efficient flow diagram to be chosen.

6. **Eccentric Drive System for Screen Shoes**
   Is delivered with fixed speed.

7. **Drive-Boss** suspension system for the screen shoes guarantees a well-balanced performance and with its oscillating screen movement results in the sharpest possible separation.

8. **After Suction with Air Recirculation**
   A precise adjustable airflow from the systems full width impeller, removes light particles from the product flow before it leaves the machine. The lights are lifted to the screw conveyer outlet and mini cyclone. 800 m³/h of air has to go to a central aspiration system or a filter.

9. **After suction Air Velocity** can be adjusted to the specific product.

10. **Adjustment** of the machines airflow and distributor system.

11. **Central Aspiration connection** for negative pressure inside the machine: 2.000 m³/h.

12. **Control Panel**
   Remote control of integral motor for shaker feeder, distributor, pre suction, after suction and air velocity. The control panel is prepared for connection to PLC and Scada system.

13. **Outlet Clean product**

---

**Pre cleaning capacity: (max 20% moisture content) may vary depending on specific conditions & impurities**

<table>
<thead>
<tr>
<th>Product</th>
<th>Flow (t/h)</th>

<tr>
<td>Malting Barley, white rice</td>
<td>25 t/h</td>
</tr>
</tbody>
</table>

**Dimensions:**

- Machine total height (including inlet hopper): 4385 mm
- Machine height: 4075 mm
- Machine length: 4175 mm
- Machine width: 2845 mm
- Screen area: 12.0 m²
- Square outlet Q-pipes: 160 x 160 mm

**Motors: (standard)**

- Shaker feeder (variable speed): 0.75 kW
- Pre suction fan: 3.0 kW
- After suction fan: 4.0 kW
- Screen shoes: 3.0 kW

**Air volume:**

- Internal air volume (pre- and after suction): 16,000 m³/h
- External suction (60 mm WG): 3,600 m³/h

**Total weight of the cleaner:** 6770 kg

**Freight volume:** 50 m³

**Dynamic loading at: 4.6 - 4.8 Hz:**

- F1 = 470 N
- F2 = 1630 N
- 10 N = 1 kg

The technical data may vary because of redevelop or another combination of the machine.
