Experience the Difference.

Unmatched Expertise: our technicians are highly skilled and trained to handle even the most complex servicing needs.

Committed to Quality: we use only Cimbria Original spare parts, ensuring the integrity and reliability of your equipment.

Customer-Centric Approach: from flexible scheduling to detailed testing, your convenience and satisfaction are our priorities.

Proactive Maintenance Philosophy: by identifying issues early, we minimize downtime and help you avoid costly repairs.

Seasonal Support: with remote assistance included in some packages, we're always here when you need us.

INSPECTION CHECKLIST INCLUDED IN THE SERVICE PACKAGE

Hot Air Generator

Comprehensive inspection for damage and leaks.

Fans

Inspected for damage, wear on impellers, V-belts, and housing.

Dust Guard

Assessment of housing wear, clogged dust separation opening, and clogged drain hole.

Cyclone

Check for sediment accumulation and wear.

Dust Auger (both)

Inspection for wear on housing, lit, and bearings.

Air Mixer

Evaluation for sediments on the small duct wall and damage to sheet metal plates.

Rain Caps

Examination for cracks in aluminium hatches.

Discharge Bottom

Check for cracks in brackets, clogged waste, and damaged shutters.

Pre-bin

Assessment for impurities and wear on the top layer of triangle ducts.

Grain Column

Inspection for wear and sediment build-up.

Hot air side

Evaluation for sediment accumulation on walls and build-up of impurities on shelves.

Exhaust air side

Assessment for sediment accumulation on walls and build-up of impurities on shelves.

Recirculation duct and Sliding valve

Check for sediment accumulation on walls and build-up of impurities on the valve.

Cooling duct and Sliding valve

Inspection for sediment accumulation on walls and build-up of impurities on the valve.

Chimney

Evaluation for sediment accumulation on walls.

Platforms

Clearing of clogged impurities on the grid.

Access doors

Examination for damaged rubber gaskets and damaged door handles.
