

FLEXVIB

GENERAL

Brand	Cimbria
Designation	Moduflex FlexVib
Use	Designed for dust-free out-loading of dry bulk material.

Technical Information - FlexVib

The Cimbria Moduflex loading chutes type: S300, S400, S500, H300, H400, F300, D300, K300, K400, N300 and N400 can be equipped with a vibrator.

The vibrator is mounted on a special console, which is normally placed on the outlet of the loading chute. The vibration power of the vibrator can be adjusted.

The vibrator is activated upon finished loading (max 5 sec.) thereby considerably reducing the amount of remaining material in the loading chute. The vibrator is used for e.g. sticky or hygroscopic products.

The vibrator can work with voltages from 220-290V and 380-500V.
