

SCREW CONVEYOR TYPE CUH

GENERAL

Brand Heavy duty through conveyor
 Model CUH
 Capacity range 15-475 m³/h
 Application Efficient conveying of dry bulk materials

Design

The through conveyor type CUH is a heavy duty industrial model, designed for horizontal or slightly ascending transport of sand, cinders and wearing powders.

The construction is a dust-proof steel construction with trough sections of 2 m., strong inner centre tube, flight of circular blanks with completely welded on one side, SY-free- standing bearings and adjustable packing boxes with Teflon packings.

A principle of intermediate bearing is applied, ensuring easy replacement of the wearing parts. The material used for the bearing is bronze as standard.

SCREW CONVEYOR TYPE CUH

Recommended effect diagrams for horizontal conveyor in standard version:

Flights can be delivered as right-hand or left-hand. As standard, the conveyors are delivered as right-hand.

Left-hand flight V

Transport direction

Right-hand flight H

Transport direction

The diagrams apply for light powder products etc, effect factor 2.3. By strongly wearing material, such as sand, salt etc., effect factor 3-6 is used. By special conveyors and extraction conveyors under silos the diagrams do not apply.

T/H = Tonne/hour - L= Length in meters

Examples of effect factors:

Effect factor 3.0 – Sawdust

Effect factor 3.5 – Coconut deposits

Effect factor 4.0 – Bone meal, cement, gypsum, earth, clay

Effect factor 5.0 – Fertiliser

Effect factor 6.0 – Ashes, cinders, sand, salt
